microX System Firmware Version 1.0.5

Changes and revisions in v1.0.5.

- [Enhancement]
We confirmed that **the microX version 1.0.5 works stably with Windows 7 and KORG USB MIDI Driver version 1.12.**

- [Enhancement]
Sort programs by name functionality added in microX version 1.0.5.
The microX system version 1.0.5 adds the ability to alphabetically sort the programs and combinations in the category menu.
When you're selecting a program or combination by category, this makes it easier to find a specific program or combination name, rather than having to look through all of the choices in numerical order as before.

- [Bug fix]
We have fixed the problem that had caused the copy-source data to be all "Multi 000" when "Multi" was selected in the "From:" (copy-source) field of the "Copy Insert Effect" or "Copy Master Effect" utility functions of pages 8 and 9 respectively for Program, Combination, and Multi modes. This has been fixed.

Changes and revisions in v1.0.1.

- [Enhancement]
Favorites function added in microX version 1.0.1.
The microX system version 1.0.1 adds a "Favorites" function.
This lets you register your favorite programs or combinations to each of buttons [A].[E] (upper) and [A].[C] (Lower) so that these programs or combinations can be recalled with a single touch. This is particularly convenient for live performances.
