

Thank you for choosing the **FUTURE LOOP CONSTRUCTION** expansion for your Korg Karma. In addition to the new Programs and Combis, this board actually provides all new sample data used in the creation of these sounds. While containing the same basic sound data as the files that came with the EXBPCM02, these .PCG files have been modified to preserve the relationships between KARMA GEs, Programs, and Combis in Banks A and B.

Because this collection relies on RPPR patterns and data, you will also need to load one of the .SNG (song data file) files into your Karma as well. It is not necessary to load this as a separate file. When you load one of the .PCG files, Karma will ask if you wish to load the associated song file as well. Simply check the box and press F8

While there are four .PCG files in this download, you will only need to load one of them into your Karma. The files "**03onlyC.PCG**" and "**03onlyD.PCG**" contain the same data, but will load the information in different locations.

Similarly, The files "**03_ABC.PCG**" and "**03_ABD.PCG**" contain the same data, but will load the information in different locations. However, while loading the EXB data, these files will also re-load the original factory data back into Banks A and B.

The Programs associated with the **FUTURE LOOP CONSTRUCTION** will be located in either Bank C or Bank D, depending on which .PCG File you load. For instance, if this is your second PCMEXB board, you may already have data in Bank C, so you may wish to load to Bank D.

The Combis and Song RPPR will also draw Programs from this new Bank, and from Banks A and B. Therefore if you have erased, replaced or changed the order of Programs in Banks A and B – some of the new Combis may not play correctly. If this happens, you will want to **SAVE** your data first, and then load the .PCG file that contains Banks A and B as well.

To LOAD only the new EXB data (Banks A & B remain unchanged):

If you wish to have Karma store the data in Bank C, then use the use the "**03onlyC.PCG**" file. (Also use the "**03_C_.SNG**" file.)

If you wish to have Karma store the data in Bank D, then use the use the "**03onlyD.PCG**" file. (Also use the "**03_D_.SNG**" file.)

To LOAD both the new EXB data and re-load the factory settings for Bank A and Bank B:

If you wish to have Karma store the data in Bank C, then use the use the "**03_ABC.PCG**" file. (Also use the "**03_C_.SNG**" file.)

If you wish to have Karma store the data in Bank D, then use the use the "**03_ABD.PCG**" file. (Also use the "**03_D_.SNG**" file.)

COPY the .PCG file you wish to load directly to a DOS format floppy disk. Karma will not find the file if it is located in a folder. Be sure to copy the associated .SNG file as well.
